Engineering Services

From requirements to certification.
Without the chaos.

MBSE + Agentic AI for compliance assurance

DO-178C | DO-254 | ARP4754A | Capella MBSE | EASA / SHGM

OVERVIEW

Three services take you from audit gaps to automated compliance

Scattered requirements, siloed teams and spreadsheet traceability push certification dates back. These three steps close the gaps.

Step 1 · Certification

Find the gaps

Audit exposes traceability gaps, missing evidence and coverage blind spots.

4–8 weeks

Step 2 · MBSE

Connect your tools

MBSE adoption links your tools into one digital thread. No more silos.

6–12 weeks

Step 3 · AI agents

Automate the work

Agents handle routine traceability, documents and model checks.

2–4 weeks (pilot)

SERVICE 1 · ACCELERATED CERTIFICATION

Close traceability gaps before the auditors find them

Software & hardware certification
DO-178C DAL A–D and DO-254 gap analysis

Traceability & verification
HLR → LLR → code → test automation

Safety & regulatory audits
Independent architecture and coverage review

Outcomes

- 100% requirements traceability
- Audit-ready from day 1
- DO-178C / DO-254 gap detection

Timeframe

4–8 weeks

Team benefit

QA confidence, audit-ready evidence

SERVICE 2 · MBSE INFRASTRUCTURE

Connect Capella, ALM, PLM, Jira and Git into one digital thread

MBSE infrastructure adoption
Capella, metamodels and domain-specific views

Toolchain integration & automation
DOORS ↔ Capella ↔ Jira ↔ Git ↔ CAD/SIM

Custom tool extensions
Scripts, plugins and automated parsers

Outcomes

- Capella, DOORS, Jira and Git supported
- One unified digital thread
- Tool silos and manual tracing removed

Timeframe

6–12 weeks

Team benefit

+30–40% engineering velocity

SERVICE 3 · AI AGENT WORKFLOWS

AI agents recover 10–15% of engineering time per cycle

Agent harness deployment
Secure AI-to-domain-model architectures

Automated artifact generation
Compliance documents and model review reports on demand

Custom MCP server integration
AI interfaces with direct access to engineering tools

Outcomes

- Routine tracing automated
- Automated compliance checks
- 1-week proof-of-concept pilot

Timeframe

2–4 weeks (pilot)

Team benefit

10–15% engineering time saved per cycle

AT A GLANCE

Each service closes a specific gap in 2 to 12 weeks

Service	Timeframe	What it closes	Team benefit
Accelerated certification	4–8 weeks	Traceability gaps, audit findings, coverage gaps	QA confidence, audit-ready evidence
MBSE infrastructure	6–12 weeks	Tool silos, manual tracing, disconnected models	+30–40% engineering velocity
AI agent workflows	2–4 weeks (pilot)	Routine engineering effort, undocumented knowledge	10–15% engineering time saved per cycle

RESULTS AND NEXT STEPS

A 40-person aerospace team cut audit findings by 67% in 8 weeks

67%

fewer audit findings
achieved in 8 weeks
